What You'll Get From This

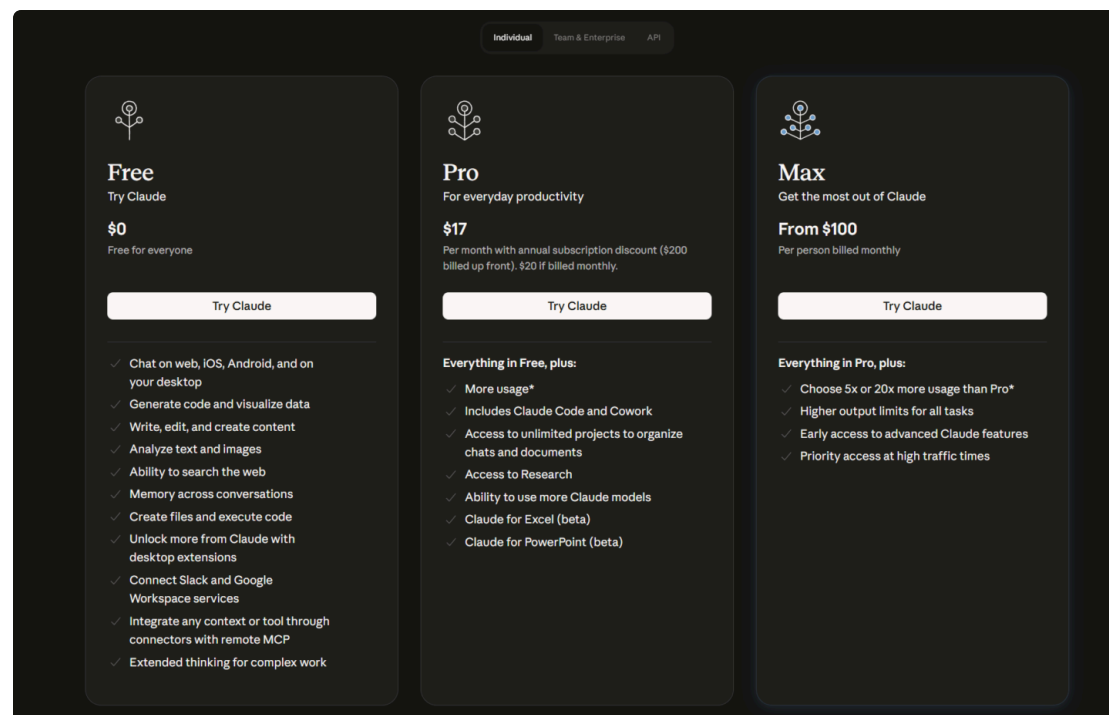

Everything installed and ready so you can start building in the next lesson. This is quick install, if you need video guide, Head to [4.1: Install and First Use](#)

The Lesson

We recommend three things. Most of you already have at least one and you can get by with the app.

1. A Claude Account (Gemini or ChatGPT can work with this, we just prefer Claude here)

Go to claude.ai and sign up. The free tier works to get started. If you want to follow along with everything in this community, here is how the plans break down:

● **Free** — Chat with Claude in the browser. Good enough to learn prompting and try the folder structure by pasting content in manually.

pick one paid plan, this is it.

● **Max (\$100/mo)** — Everything in Pro with significantly more usage. If you are building all day every day, this is worth it. Most people do not need this starting out.

Claude Code — This is Claude running in your terminal. It reads, writes, and edits your files directly. Most of what I teach in later sections uses this. You get access to Claude Code with a Pro or Max plan.

You do not need a paid plan to get value here. You do need an account.

Link: <https://claude.ai>

Most Plans on any company look something like this.

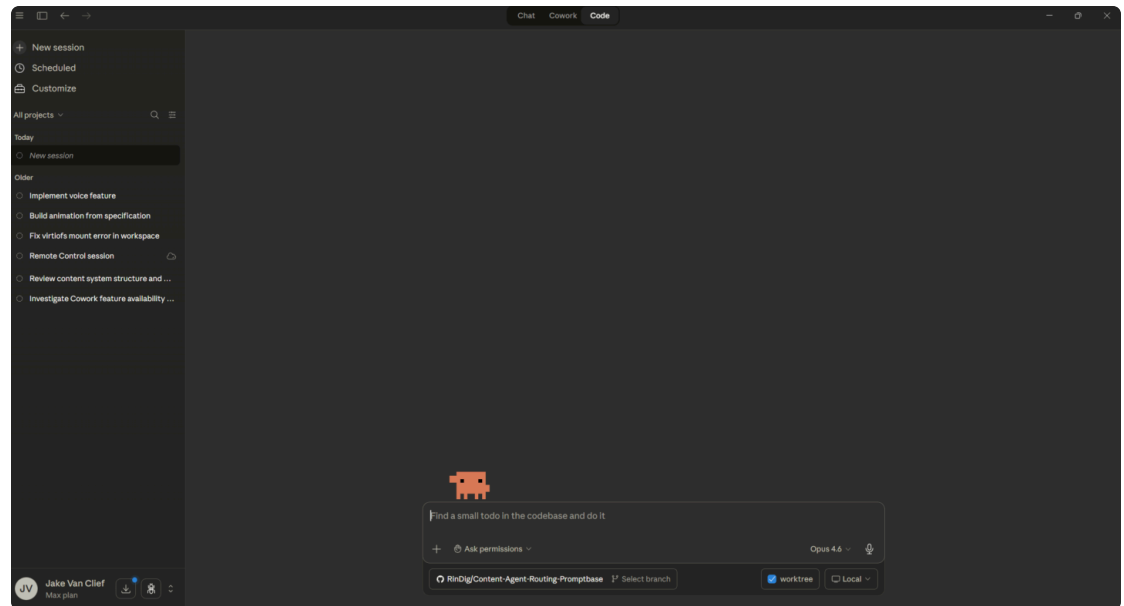

AI ASSISTANT PLAN COMPARISON			
	FREE	PRO \$20/mo	MAX \$100/mo
Core Features			
🌐 Browser-based Chat	✓	✓	✓
💬 Message Capacity	Limited messages	More messages	Much higher usage limits
📎 File Uploads	✗	✓	✓
📁 Projects Organization	✗	✓	✓
</> Claude Code Access	✗	✓	✓
📋 Overall Usage Limits	Standard	Higher	Maximum or Unmatched

2. A Code Editor

You need somewhere to keep your files and folders. You do not need to know how to code.

If you Subscribed to Claude, you could download the App to your desktop and it actually has a simpler UI (*User Interface*) you can use right away without the current setups (*only on pro plans*)

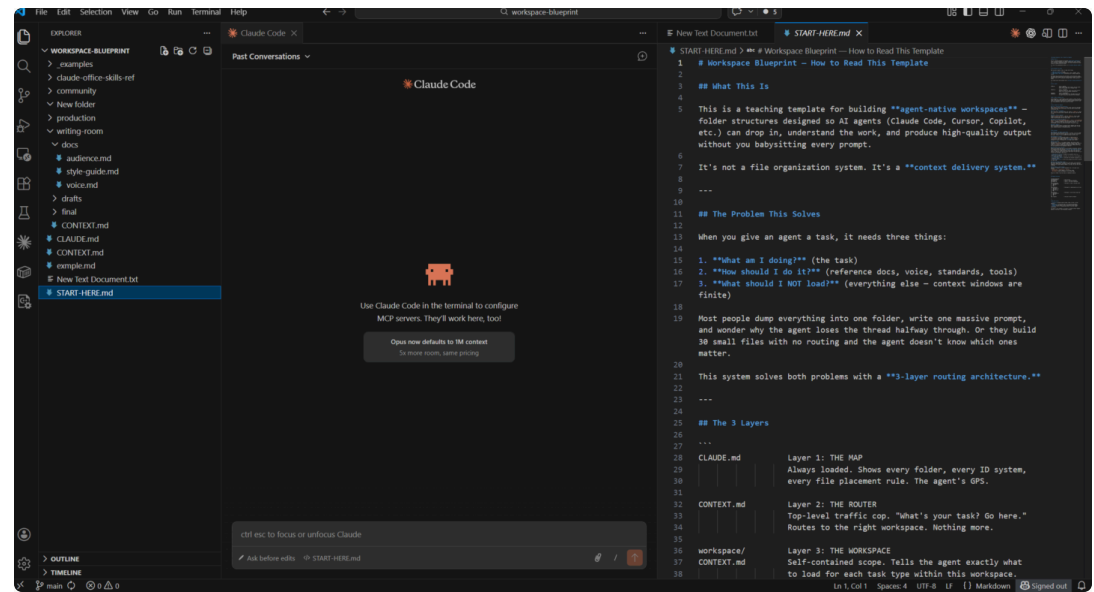

However, using an IDE (*Integrated Development Environment*)

Two good options:

Pick one. Install it. Open it once to make sure it runs. That is all you need for now.

(video guides explained below for those who need more direction).

3. Node.js (Only If You Plan to Use Claude Code)

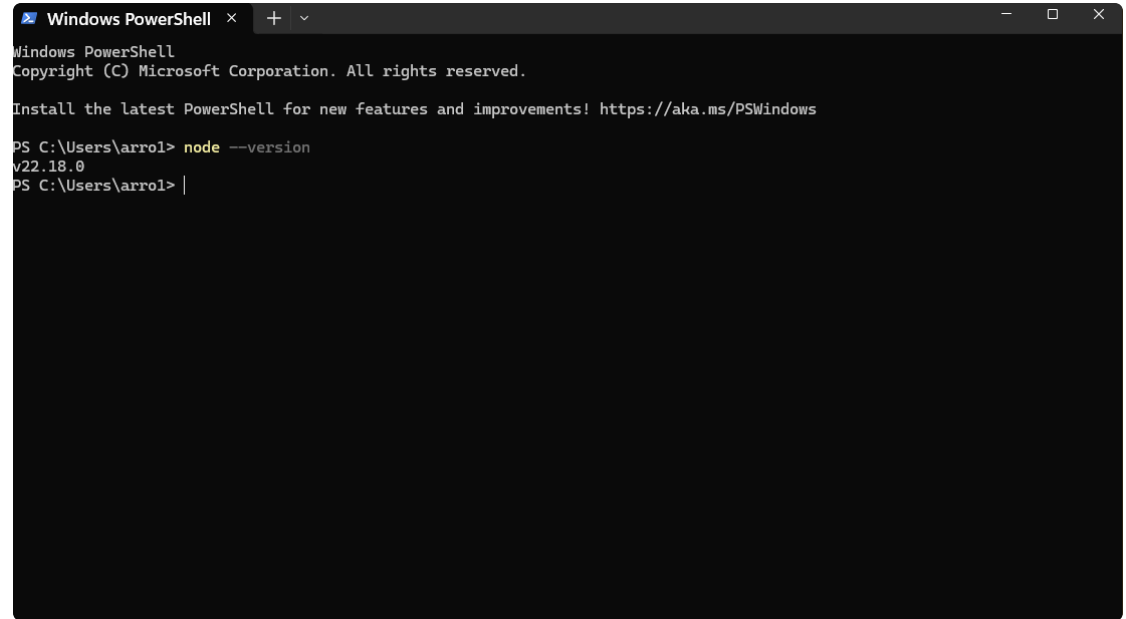

Claude Code runs through your terminal and needs Node.js to work. If you are sticking with Claude in the browser for now, skip this.

If you want Claude Code: <https://nodejs.org> — download the LTS version, run the installer, done.

To check if it worked, open your terminal and type:

If you see a version number, you are good.

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\Users\arrol> node --version
v22.18.0
PS C:\Users\arrol> |
```

That is it. Three things. If you already had Claude and a code editor, you just finished this lesson in *30 seconds*.

Go Deeper

- Want the full Claude Code walkthrough? Head to [4.1: Install and First](#)

Next Up: [1.2 Your First Folder](#)

You just got your tools. Now you are going to build something with them.
